

# $H \rightarrow \gamma\gamma$ , Light Status, and Vacuum Stability in SUSY

Dr. Jorge de Blas Mateo  
Postdoc, University of Notre Dame

Tuesday, February 12 ❖ 4:00 P.M. ❖ 415 NSH

This is one more in our continuing series of discussions on the phenomenology of Higgs bosons, this time focusing on how to explain the anomaly in the Higgs diphoton decay rate within the context of supersymmetry, and what those ideas imply about the stability of the supersymmetric vacuum.
