

## DISCREET FLAVOR

Prof. Alfredo Aranda  
Universidad of Colima, Mexico

Tuesday, March 26 ❖ 4:00 P.M. ❖ 415 NSH

I will discuss the general problem of flavor in the Standard Model including a general description of some of the possible solutions that have been put forward in the recent past. I will then present a series of simple and economical (discreet) arguments that lead to simple and interesting models which in principle can be tested at present colliders and experiments.
